Dear Hiring Manager,

As you already know, I am a junior studying Computer Engineering at Cal Poly. I am applying for the position of Software Engineer at Company because I am beyond passionate about your products and I would love to share that with others, making me the right person for the job. I have devoted two summers toward creating amazing things at Company, and I hope to continue doing so.

After two successful internships with Company, I believe that I am well-suited for a full time Software Engineering position. I mesh well with the rest of the team and I know that I can continue adding valuable ideas to the work that OS Services does. I take Cal Poly's motto of "Learn by Doing" very seriously and apply it both in and out of the classroom. I was given the opportunity to get my hands dirty from day one on projects and activities and made sure to make the best of the experience. These projects not only taught me valuable technical skills, but also created an environment for team building and cooperation. My latest endeavor has been a freelance iOS app; during which I had the chance to work with a team to create quality work for a client. This project has enhanced my teamwork and organizational skills; keeping a Git repository updated and meeting client deadlines.

Apart from my internships at Company, my job experience also includes a technical roll on campus in which I am lead student assistant, tasked with working on any sort of problem that passes to our department. This ranges from simple software installation to phone set ups and printer issues. I know that my experience in my IT position would directly benefit a full time position at Company since I know my way around a wide variety of Company products, and I see how customers use them, as well as what issues they have with them.

Please see my attached resume for more information about my work history and skills. Thank you for your time and your hopeful consideration of granting me a full time position. I look forward to hearing back in the near future.

Respectfully yours,

Chance Daniel
